

ELEMENTARY ORANGE

What we learned this week!

The second Great Lesson starts where the Earth had cooled, the oceans had formed, and our planet was ready for life.

We researched plant and animal cells and learned cells are the basic unit of all living things.

Plant and animal cells have parts called organelles that help them function and stay organized.

We covered the nucleus, cell wall, cell membrane, mitochondria, chloroplast, lysosomes, and vacuoles.

What to expect next week!

Basic Life Processes

Characteristics of all Living Things

- Living Non-Living Lesson
- Working with familiar plants and animals

Language/Math

Parts of a Sentence

Sentence Analysis

Operations- Golden Beads Material
